

java.lang.Object

Конструктор

- `public Object()`

Методы

`hashCode()` и `equals()`, `toString()`,
`getClass()`

- `public native int hashCode()`
- `public boolean equals(Object obj)`
- `public String toString()`
- `public final native Class<?> getClass()`

`clone()` переопределяется в классах
наследниках

- `protected native Object clone()`
throws `CloneNotSupportedException`;

методы многопоточного программирования

`wait()`, `notify()`, `notifyAll()`

- `public final void wait() throws InterruptedException`
- `public final native void wait(long timeoutMillis)`
throws `InterruptedException`
- `public final void wait(long timeoutMillis, int nanos)`
throws `InterruptedException`
- `public final native void notify()`
- `public final native void notifyAll()`
